

# DBS Assignment 3

## *Toy Store: Mapping an EER diagram to a relational scheme and GR diagram*

### Hand-in info

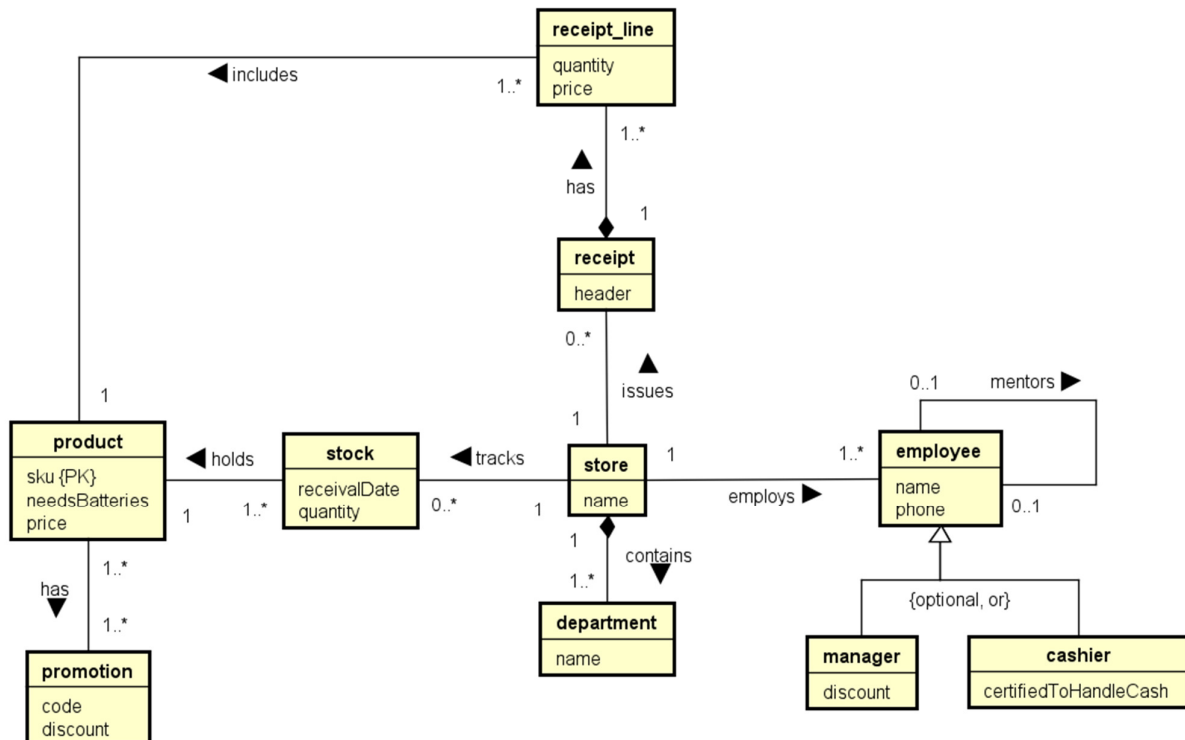

- Hand in one .pdf file with the answers to the tasks below.

### Introduction:

Before the PlayDate group asked you to create an ER/EER diagram, they had already received an early draft from another developer. That diagram wasn't completely correct, since they had misunderstood some things about the situation at the toy stores. Still, while waiting for all of you to finish your (undoubtable perfect) diagrams, they would like you to practice your mapping skills on their early draft of the diagram.

Your mission: Map the EER diagram below to a relational schema and then create a GR diagram showing the final design of the database.

EER diagram:

### *Task A, strong and weak entities*

- Identify and list the strong entities here, and explain your reasoning for identifying them as strong entities
- Identify and list the weak entities here, and explain your reasoning for identifying them as weak entities

### *Task B, mapping*

Follow the mapping steps, to create a relational schema. Then add the relational schema here as a table.

### *Task C, mapping reflections*

Describe any interesting considerations/assumptions/problems/etc. that you might have had or made during the mapping process.

### *Task D, GR diagram*

Draw a GR diagram of the final design of the database and add it here.
